

LEVEL I TECHNIQUES AND FOUNDATION

 September 26-27 2020

 San Jose, CA

Course Description

Course Overview

This hands-on course covers everything you need to get started with biomimetic restorative dentistry in your practice. The program includes the core science, techniques, and materials with an emphasis on posterior restorations. Traditional dental procedures rely on preparation designs that accommodate the restorative material or technique. This includes preparation features such as retention and resistance form, as well as tooth reduction to meet the strength requirements of the restorative material instead of prioritizing the preservation of intact tooth structure. As a result, the restored tooth has significant additional preparation and a significantly higher chance of complications such as pain, sensitivity, root canal treatment, recession, and fracture.

In contrast, the Biomimetic approach unites an understanding and appreciation of the biomechanics of natural teeth with principles and techniques which maximize adhesion. These concepts comprise the necessary components to mimic the natural tooth most faithfully. Restorative materials replicate the properties of the dental structures (*enamel, dentin, dej*) and healthy intact tooth structure is preserved through adhesion without additional preparation requirements. The biomimetically restored tooth mimics the strength, function, and esthetics of natural teeth. Biomimetic restorations include composite fillings, partial coverage restorations (*ceramic or resin inlays and onlays*), and when necessary, full-coverage ceramic restorations. However, the application technique and material selection makes a significant difference in the performance of these techniques and therefore it is important to have a sound understanding of the science.

Course Details

Price \$3500

Prerequisite Course none

Location

San Jose, CA

Speaker/s	Dr. Matt Nejad
CE Credits	14
Dates	September 26-27 2020 (2-days)
Times	8 AM - 5 PM

Breakfast and Lunch Included

Learning Objectives

- Understand and eliminate the common causes of post-operative pain & sensitivity through your adhesive technique.
- Learn how to preserve maximum tooth structure with bonded supra-gingival restorations rather than crowns.
- Understand the properties, function, and biomechanics of natural posterior teeth.
- Understand polymerization stress and residual stress of adhesively restored teeth.
- Eliminate traditional preparation design and the necessity for retentive design.
- Learn non-surgical alternatives to access and restore isolated deep margins.
- Learn how to preserve pulp vitality & reduce root canals by over 90%.
- Learn how to increase bond strengths significantly (up to 400%).
- Understand optimal material properties for biomimetic dentistry.
- Learn how to prevent stained and leaky restorative margins

Training Coverage

This course covers the following training modules and techniques:

- Polymerization Shrinkage and Stress | *Hands-on*
- Stress Reduced Direct Techniques (SRDTs) | *Hands-on*
- Semi-direct Restorations
- Supra-gingival Adhesive Inlay & Onlay Preparation Design
- Immediate Dentin Sealing (IDS) and Biobase | *Hands-on*
- Deep Margin Elevation (DME) | *Hands-on*
- Provisionalization Techniques
- Biomimetic Cementation Technique | *Hands-on*
- Adhesive Build-up Techniques (Including Endo Treated) | *Hands-on*
- Peripheral Seal Zone and Caries Removal Endpoint
- Isolation Tips & Techniques | *Hands-on*

Instruction Areas

The techniques and science covered in this course are categorized into the following instruction areas:

1. Structural Analysis
2. Caries Removal Endpoint/Peripheral Seal Development
3. Immediate Dentin Sealing/Resin Coating
4. Stress Reduction
5. Maximizing Bonds
6. Restorative Materials and Preparation Designs

Kuraray America, Inc. is an ADA CERP Recognized Provider. ADA CERP is a service of the American Dental Association to assist dental professionals in identifying quality providers of continuing dental education. ADA CERP does not approve or endorse individual courses or instructors, nor does it imply acceptance of credit hours by boards of dentistry. Kuraray America, Inc. designates this activity for 14 hours of continuing education credit. Approved PACE Program Provider FAGD/MAGD Credit Approval does not imply acceptance by a state or provincial board of dentistry or AGD endorsement 6/1/2019 to 5/31/2023 AGD provider ID #118198. This activity has been planned and implemented in accordance with the standards of the Academy of General Dentistry Program approval for Continuing Education (PACE) through the joint program provider approval of Kuraray America an approved provider and Dr. Matt Nejad. Kuraray America is approved for awarding FAGD/MAGD credit.
